### •Open API and Module Updates

SoundGraph reserves to announce on March, 2010 for API to make FingerUI module. Using this API, Individual and third party developers can easily make the module for FingerUI using the major controls in FingerUI. Every module will be updated periodically and continuously. The new updated module will have a 'New' mark and user can easily be noticed this updated new module.

### • How to Use the Touch Wheel

The most unique feature of FingerUI is to use Touch Wheel. When setting detail values as like volume, playback position, fonts and color, user can use Touch Wheel interface.

When you drag your finger according to the wheel in clockwise and counterclockwise, the setting value on the center of wheel will be changed. If user moves the rotary slider beside of wheel, the change ratio of wheel interface will be changed. In order to apply the changed value, please touch the center of wheel.

### • Add Icon to Main Menu

User can add any item on the current list or detail view to Main menu using 'Add' button on Setting menu.

User can play album or song directly on the Main menu after adding his favorite album or song to the Main menu.

In case of FingerVU 706, Main menu can be expanded up to 25 pages and media files and Widgets can be added up to 625 items. (In case of FingerVU 436, up to 16 pages and 256 items)

Now, you don't need to spend your time looking for folders but you can easily choose and play the album or song which was added to Main menu.

The weather information of your city can be added to the Main menu. As like this, user can add any module information of Video, photo list and news categories and more.
